PROJECTS

climbto350 IOS App | *Swift, SwiftUI, XCode, Python, FastAPI*

June 2023 – Present

- Developed a REST API using Python FastAPI that communicates with a SQL Server
- Used the API to develop an iOS App for a local small business and existing website climbto350.com
- Allows users to browse through climbto350's aviation jobs board
- Integrated In-App Purchases so users can become members to view job details and access other key features like a resume builder
- Planning on shipping to App Store by March 2024

Stock Trading Simulator | *Python, Flask, SQLite, HTML/CSS*

June 2023 – Aug 2023

- Used Python with Flask and SQLite to develop a full stack web application that simulates trading stocks
- Allows users to get a quote and purchase a stock using fake currency while saving their data in a SQLite database

Expenses IOS App | *Swift, SwiftUI, XCode*

Aug 2023 – Sep 2023

- Application for users to add and track their expenses in categories
- Saved the users data by storing it in the documents directory
